

April 2012 to March 2013

This report summarises recorded injury attendances to Manchester Royal Infirmary Emergency Department (ED) between April 2012 and March 2013.

Between April 2012 and March 2013 there were 25,893 injury attendances to Manchester Royal Infirmary ED. Males accounted for close to six in ten (59%) of all attendances. The month with the highest attendances was October (n=2,482) (Figure 1). The majority (71%) of attendances were recorded as other accident; Road traffic collision (RTC) accounted for the highest proportion (11%) of specified injury groups followed by sports injury and assaults (both 8%) (Table 1).

For all injuries, the highest proportion of attendances were for persons aged 20-34 (36%) and 5-19 (24%) (Figure 2). Over half (56%) of assault attendees were aged 20-34. Forty five per cent of RTC attendees were aged 20-34. Close to two-thirds (63%) of sports injury attendees were aged 20-34 (Figure 3).

Table 2 shows the arrival methods of attendances at Manchester Royal Infirmary ED. Eight in ten (80%) arrived by means other than an ambulance, while one in five (20%) arrived by ambulance.

The disposal of a patient can give an indication of the severity of the injuries sustained. Nearly half (46%) of attendees were discharged, almost a third (32%)

were referred and 12% were admitted (Table 3). Almost six in ten (57%) of RTC attendees were discharged while 8% were admitted. Over a third (35%) of deliberate self-harm (DSH) attendees were admitted (Table 4).

Table 5 shows the ethnicity of attendees to Manchester Royal Infirmary ED. Almost six in ten (58%) were white, 9% were Pakistani and 7% were black.

Table 6 presents data for assault attendees toManchester Royal Infirmary ED. Almost threequarters (74%) of assault attendances were male and56% were aged between 20 and 34 years.
