

Aintree Accident and Emergency department Monthly Bulletin:

April 2007 to March 2008

This bulletin provides a breakdown of all attendances¹ at Aintree Accident and Emergency (A&E) department between April 2007 and March 2008.

Figure I illustrates the number of A&E attendances by month of attendance. August had the highest number of attendances at Aintree A&E department during this time period (n=7,666).

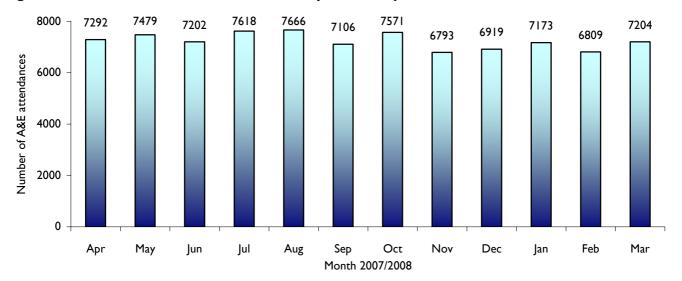

Figure 1: Total number of A&E attendances by month, April 2007 to March 2008

Figure 2 shows A&E attendances by gender. For all months there were more male than female attendances presenting at Aintree A&E department.

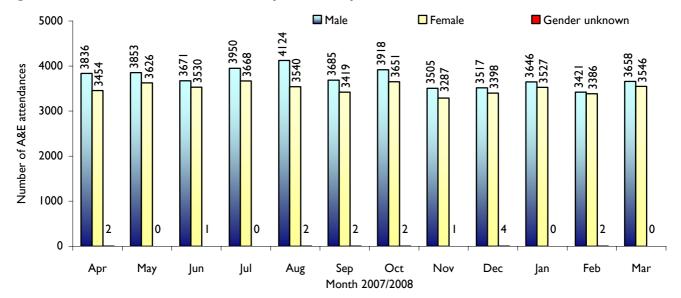

Figure 2: Gender of A&E attendances by month, April 2007 to March 2008

¹ For other A&E departments, TIIG reports on trauma incidents only. However, this report includes all attendances at Aintree Accident and Emergency. This is due to the high number of 'unknown' injury groups amongst attendances at Aintree A&E which makes it difficult to analyse trauma cases separately.

Figure 3 illustrates age group of A&E attendances for each month. The majority of A&E attendances were aged 15 plus. This is probably due to the close proximity of a local children's A&E department (Alder Hey).

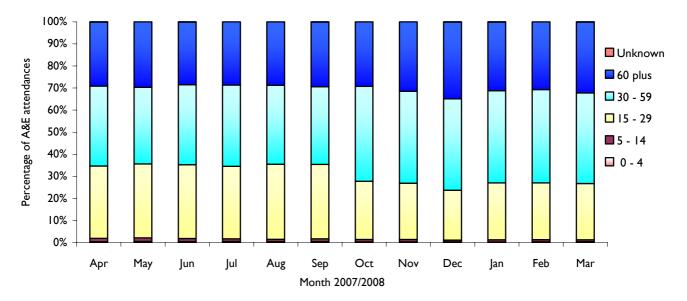

Figure 3: Age group of A&E attendances by month, April 2007 to March 2008

Table I details the injury group of A&E attendances. In over three quarters (79%) of attendances, injury group was recorded as other or unknown. This group will include A&E attendances that are not injury related, such as heart attacks. Of those injury groups recorded, falls accounted for 46% of attendances, road traffic accidents 18% and assaults 16%.

Injury Group	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar	Total	%
